PROFILE

I'm a CS student passionate about using AI, analytics and emerging technologies to solve meaningful business problems. I enjoy roles where problem solving meets strategic decision making and am driven by translating user needs into data-backed solutions. I bring strong communication, teamwork and adaptability to cross-functional environments.

EDUCATION

University of Southampton

MEng Computer Science

Sep 2024 – Jun 2028

- **Relevant courses:** Artificial Intelligence, Linear Algebra, Probability, Calculus, Networks and Security, Data Structures and Algorithms, Computer Systems, Databases (SQL), Linux, Object-Oriented Programming - Java, Python Computing, Git, Software Development (year long group engineering project - in progress)
- **Year 1 avg grade : First Class**

The Tiffin Girls' School

A LEVELS in Maths (A), Further Maths (A), Computer Science (A)*

2021 – 2023

Lampton School

GCSEs : grades 9999999988

2016 – 2021

PROJECTS

Customer Sentiment Visualiser Chrome Extension | *JavaScript(MV3), Streamlit, FastAPI, NLP*

- Built and deployed an end-to-end customer sentiment analytics system on Render, combining a Chrome extension, FastAPI backend, and Streamlit dashboard for real-time Amazon review analysis
- Delivered actionable customer intelligence by transforming unstructured review data into visual analytics for business and data science insights, blending NLP, API design, and data visualization
- Implemented VADER sentiment analysis for live insights across 100+ reviews per page

ESG-Aware Stock Classification for Green Investing | *Python, Pandas, Scikit-learn, ML Pipeline, Data visualisation*

- Developed a data-driven investment tool by building an ML classification model, integrating ESG scores with financial KPIs (P/E, ROE, volatility) using yfinance API and scikit-learn to help users identify sustainable investment opportunities
- Scalable ML pipeline enabling easy feature updates and future model iterations
- Achieved **85%** F1-score with Logistic Regression model and demonstrated **35%** ESG improvement over random portfolio selection baseline through cross-validation

EXPERIENCE AND LEADERSHIP

Software Engineering Intern

Jun 2026 - Aug 2026

Legal and General

- Built and deployed an AWS-hosted engineering analytics platform that aggregated test coverage, historical trends and quality metrics from 7 customer-facing applications, providing a centralised view of engineering health and reducing coverage reporting effort from 40 minutes to under 1 minute.
- Developed automated CI/CD workflows using GitHub Actions to collect, process and publish coverage data, eliminating manual deployment processes and saving 10–15 minutes per release cycle.
- Implemented Dynatrace observability and synthetic monitoring to improve platform reliability and enable proactive issue detection.
- Enhanced application security through SAST (Trivy), DAST, vulnerability remediation and dependency management, integrating automated security checks into the development lifecycle.

Software Engineering Group Project Leader

Sep 2025 - present

University

- Currently leading a team to initiate a full-stack application as part of a year-long engineering project
- Overseeing early requirements gathering, feature scoping, and initial user story creation to ensure alignment with project goals

- Participating in sprint planning discussions to understand design and technical trade-offs
- Coordinating team communication, assigning tasks, and ensuring progress tracking for timely deliverables

AWS Re/Start Intern

Primed Talent — 12-week Cloud Training Program

- Developed cloud computing skills by completing 30+ hours of hands-on labs with AWS services including EC2, S3, IAM, and VPC, simulating real-world infrastructure setups
- Deployed a static website using Amazon S3 and provisioned EC2 instances to demonstrate scalable web hosting, enhancing understanding of infrastructure as code
- **Achieved *AWS Certified Cloud Practitioner (CCP) certification***

Marketing Representative of Indian Society

Southampton University

May 2025 - present

- Collaborated with a team of 10+ to organise events with 100+ attendees, coordinating with external vendors and sponsors
- Improved event engagement through targeted digital marketing campaigns, demonstrating stakeholder management and customer understanding
